Job advertisement

Experienced IT security consultant for penetration tests

FortConsult is looking to recruit a new senior IT security consultant who has experience in performing penetration tests, and who have a burning desire to become part of Scandinavian's biggest and most experienced team of security testers.

Along with the rest of the team, you will on a daily basis be given the opportunity to attempt to break through the security mechanisms in some of Denmark's biggest and most security-oriented enterprises, including a number of financial enterprises and banks both in Denmark and the rest of Europe.

Your work will be supported by our research department, the best tools available on the market today and our own unique attack methods. In addition, you will have the freedom to use your own creativity to find new vulnerabilities or new ways in which to carry out an attack.

The job as senior IT security consultant

As a senior IT security consultant you will primarily be working with penetration tests of our customers' IT systems. Your focus will be on the manual and creative part of the test process, as we use automated test tools for the more trivial parts of the task.

We will as far as possible match the content of the job to your profile and the areas in which you wish to work.

Your primary tasks:

- Security assessment of our customers' Internet systems, DMZ systems, internal servers and clients, wireless networks and web applications. Each security assessment is different and is compiled on the basis of the needs of our customers and our own test methodologies, which consist of tests using a number of automatic tools, in-depth manual tests and analyses, DoS attacks and tests with insider knowledge.
- Drawing up of structured reports that document the test results.
- Presentation of the reports to our customers – to both management and technicians.
- Unbiased security consultancy services and security review of our customers' IT solutions with the drawing up of concluding reports that are presented to the customer.
- PCI security audits of customers' financial systems in accordance with the PCI standard, which is defined by the credit card companies.
- Keeping yourself 100 percent up-to-date with developments on the IT security front and disseminating your knowledge and experience to your colleagues.

FortConsult provides

- An exciting working day with challenging tasks that require a high level of technical expertise
- The opportunity to spar on a daily basis with some of Denmark's most capable security experts
- A young working environment with experienced and enthusiastic colleagues who make it a point of honour to provide customers with good service and the market's best quality in terms of IT security
- Attractive opportunities for development – both via internal training and international courses
- An international environment and the opportunity to solve tasks abroad
- A flexible and un-bureaucratic workplace with a sound economy and plenty of freedom for each employee

To find out more about what it's like to work for FortConsult, check out www.fortconsult.net under Careers/The workplace.

Your profile

We attach importance to our new senior IT security consultants having several years of experience in performing penetration tests, preferably supplemented with a broad range of experience within the IT security field in general.

We expect that you:

- Are up-to-speed on what goes on in the hacking / testing community
- Have a true desire to break into any system - and a track record that proves it
- Can perform a risk based, customer specific and threat oriented security test
- Can challenge our customer's chosen security posture
- Can challenge and suggest test scopes and attack/test methods
- Are interested in the business reasoning behind how the customer spends his security budget
- Can develop new test methodologies

In addition, we see it is as a benefit if you are certified as CISSP, SANS or have a corresponding IT security qualification at a similar – or higher – level.

You should be able to recognise yourself in the following list of characteristics:

- Quality-conscious
- Creative and innovative
- Can work and test in a structured manner.
- Service-minded with a high degree of responsibility and identification with the situations faced by the customers
- Good at communicating, both verbally and in writing – also with non-technically-minded individuals
- Doesn't have to be Danish speaking, but must speak English.
- Energetic team player
- You keep your promises

Application

Send your application accompanied by your CV by email to job@fortconsult.net or:

FortConsult A/S
Tranevej 16 -18
DK-2400 København NV
Att.: Lisbeth Inge Cardoso

If you have any questions, you are welcome to send an email to Managing Director Ulf Munkedal at um@fortconsult.net or to phone him on +45 7020 7525.
